hi,
create mandatory profiles for users who use TS.

Hi
On our TS, we are trying to deny access to the whole of drive C, except one folder, which requires all users to have list, read, execute rights, and one or more extra folder for each user (not home though), that require modify as well.

We tried applying security to drive C:, this looked like it was working because users were getting access denied, but then found they can open My documents and any other folder inside the drive.

TS= 2003 Standard, member server to 2003 Ad server.

Thanks

Andy Dyble

Cheers Dragos, but shouldn't this be possible using NTFS permissions ?
