thanks Vera for ur reply...

so you are saying that the Domain Controller Security Policy in Admin tools and secpol.msc are NOT the same thing....

I was sure they were... same settings at a first look...

could u explain better the difference between the two?

Regards,
Luca

There's no need to SHOUT, Luca :-)

You have been looking at 2, possibly 3 different policies:
Under Administrative Tools, there are links to both the Default Domain Security Policy and the Default Domain Controller Security Policy.
When you run secpol.msc, you open the Local Security Policy.

I recommend installing the Group Policy Management Console, from <http://www.microsoft.com/windowsserver2003/gpmc/default.mspx>

Then use it to run a Resultant Set of Policies, for one of your user accounts and the DC. You will see exactly which policies are applied and in which order.

Re: Vera please explain this if you can

Hi,

I'm studying TS for the exam 70-290.

I'm practicing on a 2 pcs network, one is a DC, the other one a win xp workstation.

I COULDN'T USE REMOTE DESKTOP TO CONNECT FROM XP TO 2003 DC

Yes, remote desktop users group ok etc...

Yes, Allow logon through terminal services ok etc...

I looked for 2 days... reading the newsgroup... realizing that Vera is the guru :)

OH, The error when I tried to connect was: you need to enable Allow logon through TS for Remote desktop users and bla bla bla...

NOW TELL ME, VERA OR ANYONE...

Opening Domain COntroller Security Policy in Administration tools, everything seemed fine... the right users are allowed, nobody is denied... When I opened secpol.msc from Run.... I

FOUND THE TWO ACCOUNTS I WAS TRYING TO CONNECT IN THE "DENY

LOGON THROUGH TS" SETTING!!! WHAT THE HELL? WHY??

AREN'T THEY

EXACTLY THE SAME CONSOLE (I mean the GUI and secpol.msc)???

HOW

DID THEY GO THERE IN THE "DENY" SETTING? Removed them from there, Remote desktop works...

Vera, if you know why just please dont keep the secret...

Luca
