Hi Curtis,

Does the problem occur with new users (newly-created profile)?

I ask because the IEES doesn't always work well when it needs to modify existing profiles to reflect enabled/disabled status. When a user logs on after disabling IEES they should see a window come up like this:

Personalized Settings

Removing personalized settings for:

%IEHARDENUSER_DESC%

This window is the Just-In-Time setup for IEES changing the user's registry settings to reflect the disable.

Have you tried temporarily setting the Site to Zone Assignment List to Not Configured? If it is working properly then a normal user should be able to add sites after you make the change.

All servers did indeed show IEES as removed from the control panel. Any other ideas? I'm double checking currently to see if loopback processing is configured properly for the GPO, but if the settings are showing up in the registry and in the RSoP, I do not believe it would be a GPO setup issue.

Are you not expected to be able to add additional sites when using the site to zone assignment list? In other words, it needs to be in the
