I'm not 100% sure what you mean, but it sounds like you want to connect to the console session of the server. Start the rdp connection with "mstsc /console".

This assumes that the server is running 2003, you cannot connect to the console session on a W2K server.

<JamesStickland@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx> wrote on 26 okt 2007 in microsoft.public.windows.terminal_services:

Please note that the user on the terminal service and the console are different names. Console is the terminal server itself, and session is the terminal server, but displayed on the client.

For example:
[Terminal Server]
Client-----/ RDP Session / <---/
/ Terminal Server Local Console/

Take window from the terminal servers local console, set it in the foreground of the rdp session. I need to do this so I can take control of a program run when the server completes booting.

Does anyone know how I could possibly take a window from the local console of a machine, and make it an active or "front" window on a terminal session?
