The same as it for citrix or any other TS vendor. It's a very simple matter to lock down the desktop and the advantages of remote apps are pretty clear especially if your planning on using them. Now I may be wrong and there may be a way of disabling getting to the desktop but I don't think there is.

Then what's the point of RemoteApp if one can just login to terminal server itself and use applications on it?

"Jeff Pitsch" wrote:

I don't think you can. Your best bet is to completely lock down the desktop so that only the start menu and logoff button are available. If the users can't do anything then they won't be tempted to go to the desktop. This is very easy to do by the way with Group Policy.

Windows 2008 SP1
How can I prohibit users to login on the server thru a regular RDP

Re: Restricting users to login on the server.

session

while allowing them to use RemoteApp and WebAccess?
