Ok So your including a reboot into this? I dont think that was mentioned last time. It may be that simple then as the reboot would take care of reconfiguration (or at least should). I hope your right cause that would be much simpler than going through the wizard every time to enable/disable TS. :)

Hey Jeff.

As far as we know, the TSAppCompat boolean value correlates directly to the VER_SUITE_TERMINAL bit in OSVERSIONINFOEX.wSuiteMask. At startup the TSAppCompat value is read from the registry by ntoskrnl and gets mapped via the KUSER_SHARED_DATA page to every user process. However, the word at +02D0 in the page 7FFE0000 is stuffed into OSVERSIONINFOEX.wSuiteMask by ntdll!RtlGetVersion. We sometimes use this fact, to install balky apps that won't install in terminal sessions, though they can run in a TS environment.

By the way: tsappcmp.dll calls kernel32!VerifyVersionInfo which ends in a call to ntdll!RtlGetVersion to determine the licensing-mode. *choke*
caught

Nevertheless you'll be right Jeff, things often are more wired in the Windows-World. But may be it's worth a try...

Cheers

–jolt

Re: Can TS be Turned Off/On on W2003 – easily.

Unfortunately it's not that simple. The many other changes to the OS are not taken into account when you do this. Sorry but it doesn't work like you think it does.

You can switch between remote-admin and application mode by the value

[HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Terminal Server]!"TSAppCompat"

0: Remote Admin
1: Application Mode

If you just want to prevent user login remotely, then you can disable remote desktop connection, run sysdm.cpl in a command shell, its in the Remote Tab.

I want to test a third party software and need to 'Turn Off' TS temporarily.

Can it be turned off/on without having to reconfigure, enter licence

Re: Can TS be Turned Off/On on W2003 – easily.

info
again etc.

Of course there would be no
users using TS at the time.
