hello

i didn't want to use roaming or mandatory profile, so have i an other solution to add a lot off icons to all the users of my TSE2008 ?

Hi,

To add few icons for all my users in my new Terminal server 2008, we can consider Using Roaming Mandatory User Profiles.

Roaming user profiles allow users to move between different computers and maintain the same environment and preference settings. A roaming mandatory user profile is a preconfigured user profile that you assign to users. Additionally, you can assign one mandatory profile to all users who require identical configurations. This allows you to change the customized environments for all those users by changing only one profile.

So in order to make the deletion operation effect for all users, we can create a user (for example name A) in Domain controller and add him into domain admin group.

To do so, we can prepare a good roaming profile for the coming up mandatory roaming profile setting. To configure a roaming profile, there are two methods for your reference as below:

Scenario A

=====

Roaming Mandatory User Profiles depending on group policy

1. Copy the user A profile to the roaming user profiles storing server, share it with properly permission.
2. Modify the "Terminal server Profile" attribute in the user account property and point it to the shared folder.

Re: Folder all user in 2008 TSE

3. Create a new group policy, enable "Prevent Roaming Profile changes from propagating to the server" in Computer Configuration-->Administrative Templates-->System-->User profiles. Make sure it applies to the computers will have users with roaming user profiles logon.

Note: Only the users with a roaming user profiles will be affected by this policy.

Using User Profiles in Windows Server 2003

Scenario B

=====

Per-user Roaming Mandatory User Profiles

1. Copy the user A profile to the roaming user profiles storing server, share it with properly permission.
2. Modify the "Terminal server Profile" attribute in the user account property and point it to the shared folder.
3. Manually rename "ntuser.dat" to "ntuser.man" in the profile folder.

Note: All users loading this profile will be affected.

Create a mandatory user profile
