0x800c0005 error message

Secure site problems:-

Another thing you can try is (Win XP):

Go to start/run

Type in: regsvr32 softpub.dll

"The Page Cannot Be Displayed" Error Message When You Try to View Web Page on a Secure Web Site

"queenmom" <anonymous@discussions.microsoft.com> wrote in message news:FDF745AD-F09A-4358-A3B6-0FC7DF764221@microsoft.com...

> *I've been trying to figure out why I can no longer access sites that require a password (though it was working fine a couple of months ago, before we got an apparent virus and was told to install SpyBot); I get "page cannot be displayed". This includes our financial sites which is a huge inconvenience. Now I discover that I can't run any Windows Updates; we get error 0x800C0005. Can anyone help? Our internet provider, Gateway and Microsoft have all failed to correct the problem. There has to be some logical solution, right???*
