Open Task Manager and double-click anywhere on the top Window border. Somehow, you managed to convert Task Manager to run in "Tiny Footprint Mode".

Task Manager Menu Bar and Tabs Are Not Visible in Windows XP

| After installing the latest critical updates, the processes list in task manager is missing. There is a task manager window there, but just shows the background window with no process list box, not an empty list but no list whatsoever! It still says the number of processes running at the bottom though. If I perform a system restart to a point immediately before the critical updates, everything is fine again. Any help would be appreciated!
