This is a fairly general error, I've included some links – please see which is most relevant to your situation

First of all, verify that your computer's date and time are accurate and that the Internet Explorer language option is not empty.

To check the language setting in Internet Explorer:

1. Click "Tools" and then choose "Internet Options"
2. Click the "Languages" button
3. Make sure at least one language is listed in the "Language Options" dialog.

When checking your date (including the year) and time, also check the Internet Time and Time Zone. Double click on the date/time in the notification/system tray area, select Internet Time Tab and then select update now. If itâ€™s not already checked, check automatically synchronize with an Internet Time Server â€™ WinXP.
