I am trying to make a wireless connection between two computers(802.11b).One is running win xp home and the other win xp pro. On the computer that runs on win xp pro i can assign an ip address while on the other running win xp home i dont have this option so i cannot assign a consucutive ip adress and the computers can communicate. I have tried to work with all the possible wizars without any result. What can i do to make the wireless connection between these 2 computers.Thank you
