My problem is also the same.

I just opened up a brand new Dell computer out of the box. Joined it to the domain and then logged in as local admin and tried to do the windowsupdate. And I get the same problem: Error Code: 8007F004 when installing the BITS 2.0 and HTTP5.1

I have checked the local policy as you suggested and here is what I found: On # 5. Take ownership of files or other objects, local admin is not in there. Instead I have domain\domain admins and the box is greyed out. Can't do anything. I logged in as domain admin thinking that I can add local admin group. But still no dice.

Seems, many folks have this issue. I will end up re-doing the OS, even though this is a brand new PC out of the box.

Thanx

A
