Try a search? Others have posted other solutions which aren't included in MSKB articles yet but fortunately many are recorded in threads which people who sign with MVP or MSFT were participating.

For example:

<http://groups-beta.google.com/group/microsoft.public.windowsupdate/messages/c93b6bb63b581f5c.a28fcee53cac01>

(Google Groups search for
800A0046 OR 0x800A0046 MSFT OR MVP group:microsoft.*.windowsupdate
)

In addition although the rating system on the web interface to newsgroups is often not being used as well as it could, in this particular case you can use either the "Answered Questions" or the "Threads with helpful posts" filters to see even more possible solutions for your symptom.

<http://www.microsoft.com/windowsxp/expertzone/newsgroups/reader.msp?query=0x800A0046&dg=microsoft.public>

(Web interface search for
0x800A0046
– filtered by Show: Threads with helpful posts
)
