Hi

We have got a new W2003 network with a 2 NIC ISA server as a front end firewall (behind a hardware firewall.)

I just cannot get the update site to work from the ISA server after doing it just once. I did get a 0x80072EFD error (which I followed up), but I do not get that anymore.

Clients opn the LAN connect to everywhere OK

Any ideas please

Lewej

.
