Hello:

I have many servers in my office, most of them with Windows 2003 as operating system but also there are few with Windows 2000 Server. All of them are daily updated through the Microsoft Windows Update web.

During last week there is a problem in all the servers and I think it is because one of this updates. When I log off in any of them (it doesn't matter if it is a W2k server or a W2003 one) it takes a lot of time. I mean the log off operation is very slow.

I need to resolve this problem as soon as possible, so any help would be appreciated. Thank you very much for your time.

Regards,

Jose

.
