You won't believe it – I got the darn thing working!!!
I kept searching and found this one post and followed it (what the heck, I tried all the other ones). BTW: I am nominating the guy for a Nobel Prize.

Delete the downloader folder – that's it! (C:\documents and settings\all users\application data\microsoft\network\downloader

BITS will recreate it when you start it up.
BAM! – It now works !! I have my new Windows updates installed in less than 1 minute! Yipee!!

I hope you are as lucky,
John
