I just updated your thread. <eg>

<http://www.microsoft.com/technet/community/newsgroups/dgbrowser/en-us/default.aspx?dg=microsoft.public.windo>

BTW copying URLs for the web interface to newsgroups is quirky.

If you do it from a search result you can either doubleclick on a message in order to launch the whole thread in its own window and capture that URL or you can click on the link to the newsgroup name in the post you want a link to, wait for that to cause the message to be opened in the newsgroup's full listing and then use the CopyURL button to capture the message's URL. (That's what I did above.)

FYI
