Hello.

PC system info:

- Windows ME
- 56K Dialup

I've downloaded/installed twice the recommended Microsoft updates. Both times the computer would freeze up as it was opening up windows and the programs that are in the start/task bar. I couldn't close anything and had to manually restart the PC numerous times – always the same result.

Both times the PC had to be restored to an earlier date to remedy the situation. Having restored to a date prior to the updates, I'm not sure the PC is currently "updated".

Any idea what could be causing the freeze up?

Following is the list of recommended updates that were downloaded/installed on (8.07.2005 & 8.12.2005):

-
- Canceled Friday, August 12, 2005 Cumulative Security Update for Internet Explorer 6 Service Pack 1 (KB896727) Web site
 - Successful Friday, August 12, 2005 Windows Share Level Password Update Read more... Web site
 - Successful Friday, August 12, 2005 816093: Security Update Microsoft Virtual Machine (Microsoft VM) Web site
 - Successful Friday, August 12, 2005 Critical Update for Windows Media Player Script Commands (KB828026) Web site
 - Successful Friday, August 12, 2005 Security Update for Windows Media Player 9 Series (KB885492) Web site
 - Successful Friday, August 12, 2005 Security Update for Windows Me (KB891781) Web site
 - Successful Friday, August 12, 2005 Security Update for Windows Me (KB891711)
