My meaning was to reinstall a freshly formatted hard drive with Windows XP Pro and then start with the updates. If your statement was correct it would mean we all have this problem and clearly we dont. That is reinforced by the fact that I find so few hits on this problem and that MS doesnt have a fix for their "inoperable updater/fixer function". I didnt mean reinstall on top of my massively overdone and burnt out current install. Most my friends agree if you use Windows alot, get used to reinstalling from 'scratch" every 18 months. As far as a fix from MS, they completely ignore the question so dont think they even know they/we have a problem. I would like to hear from the user just before my entry if you are out there, it said just three hours ago you were on as of yesterday. THanks,...

Dave H
