A remote code execution security issue has been identified in the Graphics Rendering Engine that could allow an attacker to remotely compromise your Windows-based system and gain control over it:

Microsoft Security Bulletin MS06-001

Vulnerability in Graphics Rendering Engine Could Allow Remote Code Execution (912919)

| I plan on rolling this patch out to my organization and wanted to know if this
| patch will co-exist with the future MS patch slated to be released on the
| 10th? Will this need to be uninstalled before the MS patch is applied?
| Also, I haven't had any issues with this patch on any of my test machines so
| far – am I correct in saying that if I did I could un-install it via the Add
| or Delete Programs on the Control Panel (I see it there once it's applied).
