My laptop and its security are crucial to my job. During the last year or so I have had so much trouble with windows update I too disabled my ms update and decided to find an alternative. I found one for those who are interested. Its free for a year (during which I am swapping to Linux). <http://www.shavlik.com/pdownloadform4.aspx> – I have found it reliable, fast and it does not mess up your system. My information comes from <http://windowssecrets.com/comp/060713/>, so it was tried and tested before I ventured forth. Sorry Microsoft, in your efforts to discover the pirates of your software you have badly let down your real customers who have already undoubtedly made you rich beyond anyones wildest dreams!
