Sorry, used a different ID on that post

I've been trying to update an XP system. All the other updates downloaded and installed, except the cumulative security update KB918899 fails each time i try to update it. I was using the WU sight to update. I then downloaded the update file and tried running it. Seemed to be installing, then at the end it says setup canceled. I am the Admin on the system and was in the admin account. Anyone else have this problem or maybe have some insight to whats going on? TIA

Try installing it manually in Safe Mode.

To keep track of things, it helps immensely if you include all of previous message(s) in your replies to the newsgroup. I have no idea what this thread is about or what you've tried previously.

Thank you.
