Before attempting another installation, please read :

Installing SP2

<http://aumha.net/viewforum.php?f=45>

Are you installing SP2 from Windows Update, the full downloaded SP2, or the SP2 CD ? Suggest downloading the full package if you're on broadband:

<http://www.microsoft.com/downloads/details.aspx?FamilyId=049C9DBE-3B8E-4F30-8245-9E368D3CDB5A&disp>

Save it, do not run it from it's present location.

Follow the steps laid out for " Installing SP2 ".

The CD can be ordered from MS. You pay for shipping only :

http://www.microsoft.com/windowsxp/downloads/updates/sp2/cdorder/en_us/default.msp

If the installation fails again –

http://www.michna.com/kb/WxSP2.htm#Cannot_install_Service_Pack_2

Scroll down to the " Service Pack 2 installation log files " heading.

Turn on Verbose logging as per the steps laid out and try the installation again.

Post back with the section(s) of the setupapi.log that contain error codes/messages. Start at the bottom of the log for the most recent entries and work your way back up.

I keep trying to install Windows XP SP2 and it keeps failing saying that an internal error occurred. And there's an error code 0x87FF054F. Does anyone know what this means and how to fix it?
