The only purpose of Symantec "products" is to take money from unsuspecting Users. It's so-called protection is laughable.

The drag it puts on a system shows that it's not designed for any Windows OS.

As long as one doesn't have to do

Step 3 : Reinstall your Norton or Symantec products

then the advice is good.

Installing *any* Symantec "product" is the same as installing malware :
<http://en.wikipedia.org/wiki/Malware>

Malware is software designed to infiltrate or damage a computer system, without the owner's informed consent.

:)

Hi,
Here is another site from Symantic that
offers the same solutions.
