TaurArian, I have the same problem trying to install the security pack KB929969 for IE7. I get the error 0x8007F0DA "Setup could not verify the integrity of the file Update.inf. Make sure the Cryptographic service is running on this computer".

I've tried all the possible solutions in the article "You cannot install some updates or programs" (<http://support.microsoft.com/kb/822798>). However, they haven't solved the problem.

Please, any suggestion ?

I have XP Professional SP2.

SirDuke, did you try any of the suggestions mentioned in the article?

"Setup could not verify the integrity of the file Update.inf. Make sure the Cryptographic service is running on this computer"

1. Start, Run, type: Services.msc

Make sure "Cryptographic Services" service is running and the Startup type is Automatic. If it isn't, right–click the service and select Properties and set to Automatic. If the service is not shown as "Started", you can start it by clicking the Start button. Close the Services control panel and try installing the service pack or security patch.

2. If "Cryptographic Services" service was already running then stop the service by clicking the Stop button, then using Windows Explorer, locate the folder Windows\System32\catroot2 and rename it to something like catrootold. Now restart "Cryptographic Services" by clicking the Start button, and try installing the update.

3. If the update still fails to install, stop the "Cryptographic Services" service.

Open a command prompt window (click Start, Run, type cmd and hit Enter) and then type the following commands:

```
regsvr32 softpub.dll  
regsvr32 wintrust.dll  
regsvr32 initpki.dll  
regsvr32 dssenh.dll
```

Re: unsuccessful installation–error 0x8007F0DA

regsvr32 rsaenh.dll
regsvr32 gpkcsp.dll
regsvr32 scbase.dll
regsvr32 slbcsp.dll
regsvr32 cryptdlg.dll

Restart "Cryptographic Services" by clicking the Start button again, and try installing the update.
