Hi there,

Just follow it one step at a time; backup your registry before editing it however, so if it might go wrong you can put the registry back like it was before.

..

Best regards,  
Michel Denie

OK – thanks – working now. I have read instructions and went through regedit process, but am not sure how to create the next step. I am not confident in case I have to reinstall the whole windows system or something! Is there any other way or this easier and safer than my inexperienced brain is telling me?  
Thanks for helping me on this one.

Hi there,

The webpage is correct and opening just fine here.

What happens when you try to open the webpage?

Best regards,  
Michel Denie

Re: Desperate UPDATE ERROR CODE 0x80070643

Hi Michel,  
Thanks for your suggestion but I cannot get a webpage up at  
the address  
you  
gave me? Not sure what to do now?

I have 7 windows updates  
waiting to be installed. They  
will not  
instal –  
it  
fails every time. Error Code  
0X80070643 I've spent  
weeks hunting  
all  
over  
the web for some  
resoukution to this problem.  
Plea can anyone help  
me?
