I cannot update SQL Server 2005 – I get this error:
Critical Update for SQL Server 2005 Service Pack 2 (KB 934458)
The initial release of SQL Server 2005 Service Pack 2 (SP2) contained an
issue that caused maintenance plan cleanup tasks to remove data before the
specified cleanup interval. Install this update to correct the
interpretation
of existing cleanup task intervals, and to avoid this issue in new cleanup
tasks. After you install this item, you may have to restart your computer.
How to Uninstall
This software update can be removed via Add or Remove Programs in
Control
Panel.

Anyway, this morning my SQL Server would not respond – the server was
up
but
SQL was not working. I restarted the server and noticed critical updates
were being performed. Upon restart (I had to manually restart because the
server would not restart itself) I noticed that the critical updates were
not
applied. Please help me with this if you can.
Thanks!
Digi
