how would I get updates from microsoft then?

"MowGreen [MVP]" wrote:

KB927891 is NOT INTENDED for Vista !!!  
If you can not delete the contents of WuRedir or rename it, then stop  
the Automatic Update service from the Services console.  
Start > Run > type in

services.msc  
Click OK or press Enter

There's no need to run any Command Prompts.

gars wrote:

Thanx Rex for replying, but I neglected to inform that my op is Vista, I  
"assumed" this was a Vista prob, not a XP prob also. So when I tried at the  
prompt, I received access denied.

"Rex999" wrote:

Thanx for the help it worked for me...  
"Gars": I found an answer from MowGreen and made a copy  
in this subject hope  
you find it helpful.

Re: Fehler 0x80245003

Show hidden files, folders, and system files:

<http://www.bleepingcomputer.com/tutorials/tutorial62.html#winxp>

Using Windows Explorer, navigate to  
WINDOWS\SoftwareDistribution

Delete the contents of WuRedir or drag the entire folder to  
the Recycle Bin

IF you get a message that a file is in use by another program,  
then stop

the Automatic Update service by going to Start > Run > type  
in

net stop wuauaserv

Click OK or press Enter

Restart the service after doing the above from Start > Run >  
type in

net start wuauaserv

Click OK or press Enter

Then download and SAVE the latest version of the Windows  
Update Agent,

if it hasn't already come down via Automatic Updates :

x86 [32bit]

<http://go.microsoft.com/fwlink/?LinkID=91237>

Download and save KB927891 if it hasn't already come  
down via AU :

<http://www.microsoft.com/downloads/details.aspx?FamilyId=7A81B0CD-A0B9-497E-8A88>

Install WUA first, then run

WindowsXP-KB927891-v3-x86-ENU.exe

Restart the system and revisit Windows Update.

my english  
is verry bad  
but i try to  
help you

search the  
map  
softwaredistribution  
in in  
windows  
than open it  
search map  
WuRedir  
and try to  
change it in  
WuRedir.old  
than try  
update  
again
