Yes, I did download the W2K3 SP2 package from Microsoft Downloads and tried both methods of installing. The second half of my initial post details this and includes the relevant log excerpts. A search in the post for "WindowsServer2003-KB914961-SP2-x86-ENU.exe" will take you to this section.

"Peter Foldes" wrote:

Did you try to download the W2K3 SP2 package from Microsoft Tech Net\Microsoft Downloads and install it manually

When trying to install Server 2003 SP2 on SBS Std 2003 SP1 from Microsoft Update, I keep getting Installation Failure Error Code: 0x8007F0DA.

No luck after completing KB822798:
You cannot install some updates or programs
<http://support.microsoft.com/default.aspx/kb/822798/en-us>

(key "update.inf"). Error 1168: Element not found.
#E359 An unsigned, incorrectly signed, or Authenticode(tm) signed file
"c:\windows\softwaredistribution\download\0c905b0297cd6cced13855c0306a49e4\update\SP2.cat"
blocked (server install). Error 0xffffbfe: Unknown Error.

I also downloaded the complete
WindowsServer2003-KB914961-SP2-x86-ENU.exe
and keep getting:

Service Pack 2 Setup Error

Setup could not verify the integrity of the file Update.inf. Make sure the
Cryptographic service is running on this computer.

This error occurs when directly executing
WindowsServer2003-KB914961-SP2-x86-ENU.exe or when executing
Update.exe from
the extracted files. The amount of time it takes the error to occur varies.
Some times immediately after executing, and other times after proceeding
past
the license agreement acceptance.

I tried to include all of the relevant log entries in this post but exceed a
post length limitation, so I have exclude some of the succesful lines.
