hi, and really thanks for your time,
i've turned off nav and gone into services, and stopped everything to do with symantec. still the same bloody error code though when i check for updates.. i'm not sure if it is nav related, as the computer ran fine for months updating itself -WITH nav running..

BITS was already running, when i checked. it was in auto with delay mode.

There is no wuwebcontrol class in internet properties/programs/manage add ons, either :(

the only program that was new at the time that this started going wrong was rainbow 6 vegas game, and daemon tools to simulate the dvd being in all the time. both are now uninstalled.
