As you had the correct jscript file at the time you installed ie7, (as shown in your registry and the "C:\WINDOWS\ie7" folder) "something" – has caused some corruption or older version to be installed. (maybe ie7 does not install jscript 5.7 for everyone– I don't know)

If ie7 installed properly, you should have :  
C:\WINDOWS\ie7.log  
C:\WINDOWS\ie7\_main.log  
(assuming you use "c" )

ie7updates folder are the updates to IE applied after installing ie7 and that are available for uninstallation. They show replaced files.

I would follow Mr. Green's instruction (and hereafter) to download and install KB917344 then the cumulative IE update

If everything working properly, then update to this:  
"Windows Script 5.7 for Windows XP"

| To mae:

|  
| I followed the instructions on <http://www.bleepingcomputer.com/tutorials/tutorial62.html#winxp> , then  
| searched for ie7.log using the Windows search tool. The only file found in C:  
| containing 'ie7.log' in the filename was KB939653-IE7.log, located in  
| C:\WINDOWS. I opened it and searched for 'IECUSTOM' and 'jscript.dll' using  
| 'CTRL+F', but found none of those words.

|  
| In "C:\WINDOWS\ie7updates", there is a subfolder "KB939653-IE7". In there, i  
| looked version number of 'Iexplore.exe', 'Advpack.dll', and 'Dxtrans.dll',  
| and none of them is v. 7.0.6000.16544, which is the right version number of  
| 'Iexplore.exe', 'Advpack.dll', and 'Dxtrans.dll' contained in the

Re: Missing Windows update reported as a vulnerability by TMH and

| KB939653–IE7 update ("for Internet Explorer 7 for all supported 32-bit  
| editions of Windows XP"), according to Microsoft MS07–057 Bulletin. So, I  
| suppose that the files in "C:\WINDOWS\ie7updates\KB939653–IE7" are the ones  
| to be restored, replacing my present files in the case i uninstall KB939653.  
| Is that right ?

| Likewise: In "C:\WINDOWS\ie7", I have a jscript.dll file and it is  
| v.5.6.0.8831. So, if i uninstalled IE7, my jscript.dll file in  
| "C:\WINDOWS\system32" would be replaced by this version, right ? But if you  
| say that the installation of IE7 updates jscript.dll to 5.7, then how would  
| you explain that presently, and having IE7 installed, my version of  
| jscript.dll in "C:\WINDOWS\system32" is only v.5.6.0.8825 ? Your jscript.dll  
| is version 5.7, right ?

| I believe my situation is different than yours...

| And your post raises yet another problem: If i reinstall manually KB917344  
| as i intended, then my jscript.dll would become v.5.6.0.8831, but since i  
| have IE7 installed, it should be v.5.7. Isn't that so ?
