I recently updated my OS from XP Home to XP Pro (I needed some of the extra options). Since then, I have been unable to update windows via the windows update site. It tries to install the newest updating software, but fails. I have tried to manually install it in safe mode, reinstall the prior version (update agent 3.0), and then update, but this also fails. I used an upgrade CD to upgrade to XPPro. Everything else with the OS seems to work fine.
Any suggestions?????
