Thanks. Lots of info. Going through. I suspect it may not due to pc settings as t is fine when connected directly o the adsl model. Hit problem if I have the Linksys wireless router between the modem and my pc. Maybe some forwarding thingy that I need to set on the router.

Got some more info from the log file.

Do any other websites not work (like Yahoo! mail or Hotmail)? If so, you might have an MTU issue on your PC and/or router. Even if all other sites work, the tool below is worth looking into if you've already done the easy (and not so easy) stuff.

Go to <http://www.dslreports.com/tools> and poke around, there is a lot of good stuff there. For your specific issue, see Dr. TCP (<http://www.dslreports.com/faq/578>) on how to test and set your MTU.

RE: Update can't work behind Linksys wireless router. Direct to AD  
router works fine for all except Windows Update.

Pls help.

Thks.
