Yep definitely being discussed :). MSRC knows/sees these posts and we have been tracking issues in CSS Security as well.

Clipped

Kurt Falde [MSFT]

Hello Kurt Falde from MSFT.

Thank you for letting us know that MSRC knows and sees these posts and have been tracking certain issues.

What a shame they did not see fit to let everybody know earlier – instead time has been wasted by those trying to help, and posters are left running around like 'farts in colanders not knowing which hole to get out'.

So in the meantime what are the computer ignorant, like myself, supposed to do if they have the problem after install of KB942615.

I will not attempt to do anything with the Registry – though I have noticed when it was first mentioned, that the below link to this registry fix does not mention KB942615.

<http://support.microsoft.com/kb/942367>

Perhaps I have missed something along the way.

Anyhow, thanks for the info – I think I will wait for the next update to fix the update that updated the fix – if you follow :-)

Rgds
