Also, how can I check to see if I already have this update? Can I update to a different version of .Net? Wpi;d that help?

Thanks  
JDT

Tried several days to install this update on a new (2 week old) computer. Fails each time. Here are the details as listed in autoupdate. Running Vista Home premium. Thanks for any help.

Security Update for Microsoft .NET Framework, Version 1.1 Service Pack 1 (KB929729)

Installation date: q2/q9/r007 3:01 AM

Installation status: Failed

Error details: Code 66A

Update type: Important

A security issue has been identified that could allow an attacker to compromise your Windows-based system running the Microsoft .NET Framework and gain complete control over it. You can help protect your computer by installing this update from Microsoft. After you install this item, you may have to restart your computer.
