Robin,

I believe I had a version later than yours, my computer is about 30 days old?

From what I understand, when an update is available from MS for that driver,

they'll make it available, than SP1 will show up after that install of the driver update.

I'll be patient and wait awhile, I can't afford to screwup a computer only a month old and I definately need sound!

which driver do you have? cause i noticed that on the list too and mine is 6010.0.5343 and when asking it to update the driver it states I have the latest one. I am up to date on everything else but sp1 still will not show up in WU

I noticed that my Sigma Tel Codec driver was listed as possibly blocking the SP1 Vista update showing up within windows update as its a known conflict with Vista SP1, however I am unable to locate any new driver to install, as MS suggest getting a new version of that driver, apparently I have the latest version of the driver? I checked both my manufacturer, Gateway, and googled Sigma Tel and located nothing?  
So I guess I won't install Vista SP1 to avoid sound problems.

Hi there,

Take driver updates from the manufacturers website, never from windows update unless you like problems.

Best regards,

I had the same problem, i fixed it by going back to a prev date restore backup and then selecting not to update sound card driver. worked for me!  
i messed around with that update for about 5 hours could not get any sound to work.
