Hello there,

That is if your hardware does not function well and an updated driver is needed for that reason.

If it ain't broke: do not try to "FIX" it.

Who the heck is General Faillure and what is he doing on my hard drive? ;)

Best regards,
Michel Denie

I'd recommend that you only download/install driver updates for that machine that are offered by Dell Support Downloads pages.

5-yr-old Dell Inspiron 2800 laptop XP wrote:

As at 20 April 2008.

My Winfows Update is giving me the option to install two hardware updates:

" Optional hardware updates

Intel Corporation Intel(R) 82830M Graphics Controller
Dell Inc. – Video – Intel(R) 82830M Graphics Controller
Download size: 0 KB , 0 minutes (Downloaded; ready to install)
Intel Corporation display software update released on February 10 2004.

Re: Dell Inc. – Video – Intel(R) 82830M Graphics Controller

Details...

Microsoft HID Non–User Input Data Filter

Microsoft – Other Hardware – HID Non–User Input Data Filter

Download size: 0 KB , 0 minutes (Downloaded; ready to install)

Microsoft Other Hardware software update released in January, 2007

Details... "

I installed both, only to find that on reboot my screen went AWOL!

Luckily the keyboard was still functioning so I restarted in Safe Mode
and

performed a System Restore taken just before these two, so I know it was
one

of them. I suspect it is the 82830M.

I run a Dell 2800 Inspiron laptop.
