Hello David,

Clearing Temporary Internet files, cookies and history in Internet Explorer

Tools>Internet Options>General

You'll see Delete Cookies, Delete files, Delete History

Reboot and try Windows Update again.

See if the solution in this thread helps.

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx?lang=en&cr=US&guid=&sloc=en-us&dg>

Also please confirm your system clock and Time Zone also the Date set properly, Having it set incorrectly can cause this type of behavior.

I hope this post is helpful.

Let us know how it works °ut.

Good luck

Active X control takes long to process when checking for updates. Just reload XP OS with SP2. Afraid I may have issues with btaining updates. Any ideas?
Thanks. David
