We don't have the full infrastructure in place yet. The Shell does currently get notified when a screen saver can be show and then removed. If you have 4.2 look for this code in the shell. Also pull the screen saver code from the WBTShell and just plug it in.

```
switch(wp)
{
case PBT_APMUSERIDLE:
    // ScreenSaver start
    RETAILMSG(TRUE, (TEXT("Screen Saver Started.\r\n")));
    break;

    // Screen saver app should be looking for this message
case PBT_APMUSERACTIVE:
    // ScreenSaver end
    RETAILMSG(TRUE, (TEXT("Screen Saver Ended.\r\n")));
    break;
}

break;
```
