Hi,

I am new to application development in wince.

i am using evc++ 4.0

I have buffer in application side which has video data.

The video buffer updates for each event from application side.

How to display the live video in application side.

I am totally new to MFC.

Suggest the steps to display the video data inside the rectangle which i created in MFC application.

No DirectShow and OpenCV.

Please suggest the steps for live display in application side

i am searching for long time.

But no reference except directX and OpenCV

.
