Has anyone used Hopper to test MTTF? It just won't accept my command line arguments to run in one app only.

According to the readme.txt, it should work like this:

```
rapistart hopper.exe /t1 /aTest.exe
```

After this is run, the device displays an Alert message box "created:xxxx, modified:xxxx" and never runs the test. It runs just fine if you don't specify the /a parameter, but then it randomly runs every app on the device. I need to test ONE app only.

I am running it on Smartphone 2003.

Hopper is a MTTF tool, a part of the PowerToys.

Your help is appreciated!!!!

Thanks,
Joe
