

How to reduce the height of SIP?

Source:

I'm developing a custom SIP on evc3.0 with PPC2002, modifying the included source of a Book: "Programming Windows CE 2nd Edition," and have problems with resizing it.

I altered the values of IMINFO structure, the parameter of SetImInfo(), but it didn't work at all.

I even set the RECT's members to strange values on every suspicious place, but things still don't change.

How can I solve this problem?

Any advice will be very appreciated. Thanks for reading.
