There is no Microsoft OLEDB provider (or any other native provider) for PocketPC that can connect directly to Sql Server. Are you sure you need direct connections to Sql Server? If you have a mostly disconnected scenario I would suggest trying Sql Server Mobile which can replicate data with Sql Server.

If you need direct connections you have the option of using ADO.NET providers from Sql Mobile (see System.Data.SqlClient)

In any case, the correct place to ask this question is microsoft.public.sqlserver.ce

Hi,
I am developing application in EVC++. My application needs to directly connect with SQL Server 2000 through OLEDB. I have tried including SQLOLEDB.h and it fails in CoCreateInstance Anyone Kindly help me to solve this problem. Is there any method to connect to the SQL Server 2000 database.
Thanks & Regards,
Vetriselvan
