Hi,

I have a lot of difficulties to have a connection:

I:\>ftp 191.0.48.94

Connecté à 191.0.48.94.

Connexion fermée par l'hôte distant.

After some investigations, it seems that after the ScheduleEvent() call, very often, the function is not scheduled, and sometimes, it is. If the function is scheduled, it seems that in HandleSession() when a command is received, the nCount value is equal to -1.

Has somebody already got a problem related to ScheduleEvent? I could'nt find any documentation.

Thahks in advance.

FYI, the way you'd do this is via the registry [HKLM\COMM\FTPD] IsEnabled: DWORD 1.

Re: FTP server

I am tried to access the FTP server on my Windows 2000 based PC.it shows me the " Connection refused". Pls tell me anybody how to connect the FTP server on Windows CE.

By default, it doesn't accept any connections because FTP is an inherently insecure service. You need to configure it to accept connections first.
