I think that you're asking in the wrong place. This group, as indicated by the name, is for discussion of embedded programming for Windows CE, not for desktop or server operating systems. You'll get better answers and avoid mucking up the archives with off-topic threads if you post in a better group.

[http://support.microsoft.com/gp/dst\\_topissues](http://support.microsoft.com/gp/dst_topissues)

talks about the general issues.

Where do I look to make sure the KB931836 has been installed on my servers?
