Hi Thomas,

It is not "a chip", as in one chip. Cellcore is some functionality that is exposed to applications. On the other side of cellcore drivers talk to hardware and supply cellcore with the functionality. An OEM may choose to implement the functionality using any available chip, create an ASIC themselves or even hire a leprechaun with a very small mobile phone that sits behind a tiny desk inside the device handling all the requests made by cellcore (these are usually the devices with a "Recycle" sticker on them, for obvious reasons).

In short: what chip is used for what part of functionality is very device specific.

Good luck,

Michel Verhagen, eMVP

hello, All:
who knows which chip is used for the cellcore of WINCE6?
thanks!
