hi all,

when i am trying to build my own boot loader, i am getting an error like,

mmumacro.s(39) : error A0034: undefined symbol: FORCE_TGTCPU

but in the command line i alerady have given like set FORCE_TGTCPU=ARM920

what i missed?

the same code works fine for the armintegrator eboot.

what went wrong?

regards

Sujith
