When I said the web server componet, I mean httpd.dll. This is the only file I found on my CE device. Is this means that I am missing other components for the web server? I already know the asp is not implemented on the device. Now we are asking our OEM for help. In order to build an ASP server application, what else do I need to be included in my device? Sorry to ask so many questions. Since I am new to windows ce and web server, until now I am still very confused.

Any help will be very appreciated.

Thanks.

Jean
