This comes up quite a lot. I'm glad to see you at least did a quick search before asking, but try searching this NG for "remove desktop shortcut" and you'll get a lot more answers.

A previous thread explained how to modify common .BIB files to remove desktop shortcuts. I'm more interested a modification that doesn't affect every single platform. Is there a way to remove an entry from a platform-level .BIB file in a using a project-level .BIB file or through some other means?

Secifically, I need to remove

```
..\cesysgen\oak\files\directx.bib(159): ceplayer.lnk
$( _FLATRELEASEDIR)\ceplayer.lnk NK SH
..\cesysgen\oak\files\ie.bib(110): iesample.lnk
$( _FLATRELEASEDIR)\iesample.lnk NK SH
```

from there respective files, and also remove the associated .DAT file entries

```
..\cesysgen\oak\files\directx.dat(16):Directory("\Windows\LOC_DESKTOP_DIR"):-File("Media Player.lnk", "\Windows\ceplayer.lnk")
..\cesysgen\oak\files\directx.dat(17):Directory("\Windows\LOC_PROGRAMS_DIR"):-File("Media Player.lnk", "\Windows\ceplayer.lnk")
```

in my Windows CE 5.0 x86 platform.
