Have you tried this:

```
[HKEY_LOCAL_MACHINE\System\StorageManager\Profiles]
"Mountflags"=DWORD:1
```

- 1 Specifies a hidden file system. <- hidden
- 2 Specifies that the file system may contain the system registry. The first mounted partition on the store gets the hive.  
For more information, see [Hive-Based Registry](#).
- 4 Specifies to mount as the root of file system.  
For more information, see [Mounting an Installable File System as the Root Directory](#).
- 8 Specifies to hide the ROM when mounting the file system root. Use with `FLAG_ROOTFS`.  
For more information, see [Mounting an Installable File System as the Root Directory](#).

see "Storage Manager Architecture" in the CE4.2 help.. (note this changed in CE5.0)
